

## MADE SAFE NL

Manufacturing & Processing  
Safety Sector Council

### SAFETY DIAGNOSTIC

The [Made Safe NL Safety Diagnostic](#) is a first-step assessment tool that provides a snapshot of your organization's current health and safety program implementation status. This FREE diagnostic tool will identify strengths, weaknesses, and improvement opportunities.

Based on the diagnostic results, our expert safety advisors will design an implementation plan or road map outlining the next steps to improve your organization's health and safety culture and outcomes.

Made Safe NL's safety advisors will provide support and mentorship through hands-on training, coaching and mentoring to ensure your success.

Your organization can also use the Safety Diagnostic to benchmark results annually and document successes or improvement opportunities to enhance organizational safety culture and outcomes.
